

Technology that powers your business success.

B r i d g i n g t e c h n o l o g y

Technology that powers your business success.

Research and development are at the heart of our mission. Our leading-edge engineers are at the heart of developing new concepts and technologies—from rule-based software and dynamic schema to software fault tolerance and spatial subscription. Our commitment to provide offerings that deliver real value to our customers is underscored by the power and knowledge of a unique partnership between our software engineers and our Advisory Board. The Advisory Board, comprised of some of the world's leading IT scientists from institutions such as MIT and Cornell University, works with us to validate these next-generation concepts, which form the foundation of tomorrow's "killer apps." Together, we provide our customers with the technology of tomorrow that works in the world of today.

w i t h b u s i n e s s k n o w l e d g e

Today's business environments are in a state of constant flux. Margins and lead times are under increasing pressure, and customer demands always come first. Now more than ever, your business needs to be agile and responsive to compete in the global market. The right technology will enable you to meet these demands head-on; the wrong technology can bring your business to a standstill.

You need a technology partner who understands the unique challenges of your business, adapts solutions to your current situation, and creates a technology foundation that will work for you today and grow into tomorrow.

At MillenniumIT,[™] we specialize in creating applications and solutions that serve the financial and telecommunications industries around the world. Our innovative approach to technology turns original ideas into future-enabled products and solutions that deliver value beyond the expected. Our software is flexible and user-adaptable, and works with your existing infrastructure to transcend system limitations. Our cost-effective, future-compatible approach can extend the life of your existing investments while opening the door to the future.

The keys to our success: a sound understanding of your business challenges and goals, and a commitment to finding innovative solutions to help you solve problems and successfully grow your business.

Capital Markets and Service Billing Solutions

Business Innovation—Dynamically

At MillenniumIT, specialized industry teams work closely with our product development and marketing departments to help achieve a perfect fit between our products and your needs and expectations. All of our products and services are designed with your objectives in mind. Our solutions are implemented to solve your specific business problems, and our partnerships with our clients are built on collaboration and innovation.

All of our solutions incorporate our unique software tool “Business Innovation—Dynamically” (BID). With BID, real-time business management has come of age, and the business options are practically endless. By enabling the alteration of business processes in near real-time by reconfiguring the application to reflect changes in business rules, BID brings flexibility and a competitive edge to clients.

“We were able to re-launch trading in Nasdaq securities using technology from MillenniumIT. Thanks to the flexibility of their product, our system commenced “live” operations in less than six months from project initiation and was executing up to 650,000 trades a day.”

Mr. Tom Targonski, Vice President, Project Management Office, Boston Stock Exchange

The WallStreet™ Product Suite

Millennium™ Exchange™	Automated Trading System
Millennium Surveillance™	Surveillance and Market Monitoring System
Millennium Depository™	Central Securities Depository
Millennium Settlement™	Clearing and Settlement System
Millennium Trader™	Front-end Trading
Millennium Gateway™	Real-time Protocol Converter of Dissimilar Networks
Millennium StreetAccess™	Intelligent Order Management System

In the capital markets sector, BID enables the user to set up trading systems to handle a wide range of different requirements and rules for trading everything from common stock and index shares to bonds, commodities, and derivative securities. In the telecommunications industry, new services and billing options can be set up in minutes, designed to handle even the most complex of transactions, from cross-service discounting to multiple billing and credit options. Most importantly, legacy systems and other equipment can be easily integrated with the new systems, extending the working life of your existing equipment.

Capital Markets Solutions

MillenniumIT launched its first capital markets solution in 1996, with the implementation of an automated depository system at the Colombo Stock Exchange in Sri Lanka. Our partnership with the Stock Exchange resulted in the creation of the world’s first event-driven trading system, which we implemented in 1997. Our solution, a prototypical straight-through processing (STP) system, evolved over time into the WallStreet™ suite of products, handling all aspects of the trading process. WallStreet now powers exchange networks in Asia, Africa, Europe, and the United States with its scalable and fault-tolerant design that delivers true straight through processing.

Since 1996, we have successfully launched systems at MESDAQ in Malaysia; the Stock Exchange of Mauritius; the Securities Depository Agency of Croatia; trading and depository systems in Kenya and Ghana; and the Boston Stock Exchange, one of the fastest-growing regional exchanges in the

Our Service Billing Product Suite

Millennium™ Bill™	Real-time Rating and Billing
Millennium Mediation™	Real-time Mediation
Millennium Product Management™	Dynamic Product and Service Management

MillenniumIT's system features global connectivity and supports a 24/7, 365-days-a-year trading regime. Our distributed architecture system can handle over 100,000 orders/quotes per second using "off-the-shelf" hardware.

United States. We are in the midst of implementing systems at a primary exchange in the United States and for one of the world's largest voice and electronic interdealer brokers.

Our Capital Markets Consultancy team draws on its global experience of implementing automated systems in vastly different securities exchanges on four continents to help customers amend and adapt existing trading systems, and formulate new business rules and processes.

Service Billing Solutions

Our products for the service billing industry permit real-time convergent billing and rating, resulting in better credit control for operators and higher cost efficiencies for their customers. In 2003, MillenniumIT launched and implemented a truly flexible, convergent billing application at the Telekom Malaysia subsidiary, Dialog Telekom, providing them with the ability to price and launch new services with ease, and accurately target those services at the right market segments.

Our Service Billing Consultancy team manages the process of creating new functionality for the MillenniumIT products. Their experience has enabled us to build effective solutions that intelligently meet the challenges of "all-service" billing and mediation, encompassing voice, data, multiple charge structures, and supplementary services. At peak time, the system can handle over 2,000 call events per second sustained, using "off-the-shelf" hardware.

Enterprise and Service Provider Business

Global Partners: Sun Microsystems • Cisco Systems • Oracle Corporation • Veritas Software • Infosys Technologies • RSA Security • Check Point

MillenniumIT is a trusted IT architecture, service and consulting provider creating innovative, scalable solutions for business and industry in association with our technology partners.

MillenniumIT has been an integral part of the development of the Sri Lankan telecommunications sector, supporting infrastructure and service providers to raise the quality and increase the range of service options available to customers. Today, we remain the principal IT infrastructure provider for every significant Sri Lankan ISP, and a major technical partner of the country's largest fixed line telecom company, Sri Lanka Telecom, and its largest mobile operator, the Telekom Malaysia subsidiary, Dialog Telekom.

MillenniumIT is committed to network technology and open systems. We partner with our clients to leverage new business opportunities presented by the Internet. MillenniumESP, our Enterprise and Service Provider Division, provides customers with an unbeatable combination of business and technical expertise through a diverse and comprehensive offering of customized service products and warranty-based support, including:

- Consulting, design, implementation, and support of carrier class network infrastructure for service providers
- Design, implementation, and support of end-to-end solutions for enterprises and service providers
- Disaster recovery services
- Information security services

- Implementation and support for selected applications in the financial service industry
- Data center management services
- Systems integration
- Training on Sun™ hardware, Solaris™ OS, Oracle® RDBMS, and Application SW

Our 24-hour Service Centre, located in Colombo, Sri Lanka, coordinates the worldwide support for warranty-based activity, maintenance calls, and time and material services.

People Make the Difference

The best customer support isn't about keeping a customer's information management system running—it's about keeping the business operating at peak performance.

Technology is only as good as the people who build it. At MillenniumIT, our people are our greatest asset. We hire the best so that you can work with the best. And as you would expect from a technology company, we run our organization with the best systems to create a real-time, effectively paperless enterprise in a virtual space where geographical separation between offices and work sites no longer matters. What does matter to us is our commitment to our employees and our customers alike. Because where real-time meets the real world, real people matter most.
