

MARC Batch Run Process

Batch runs are scheduled to take place weekly. But in case of a postponement the batch run will take place the following week and all robots submitted up to this date will be evaluated.

The following image illustrates this scenario graphically.

Scenario Explanation

The n^{th} batch run is performed by robots submitted until midnight of Sunday in week 1. The $(n + 1)$ batch run has been postponed. Therefore the $(n + 1)$ batch run will take place after the Sunday of week 3. Hence, robots submitted up to this date will be evaluated.

In both cases the results of a batch run is posted on the website at the beginning of the following week.
